

# Book Borrowing from Library

By Susanne Heim,  
Etienne Couque-Castelnovo  
and Benedikt Rein

# Recap: Camunda

- Implemented 3 processes:  
Borrowing, Returning, Overdue Check
- Using PyZeebe client to connect models to local JSON database

# UiPath: Use Cases

- Process almost applicable to Camunda
  - with changes to initial model
- Idea: Running Python Scripts automatically with UiPath
- Further Applications: Referring from incoming payments to overdue receipts
  - Robot initializes incoming message events to Camunda

# UiPath: Demo

- Implemented Case:

Overdue check and inform customers per email

# UiPath: Benefits and Obstacles

- Implemented an example for further applications
- Python Scope in UiPath did not work properly with actual versions
  - only runs on “Windows Legacy” and Python  $\leq 3.6$
  - Errors caused by script not visible through debugging in UiPath

# Discussion

- Time for your Questions!
